Jericho Juniors To Have Science Research Published

Jericho High School juniors Kristin Wong and Brendan Liu, both students in Serena McCalla's Independent Science Research class, will have their research published in the January 2012 edition of *The Journal of Experimental Secondary Science*.

"Our article discusses the implementation of various methods to achieve high-performance water filtration and efficient heavy metal adsorption," said Wong. "Currently, the effects of the global water crisis are becoming increasingly severe, so water purification is a very prominent topic in our society. It's so great to see all of our hard work culminate into such a noteworthy accomplishment!"

The Journal of Experimental Secondary Science is a professionally reviewed academic science journal for High School research whose mission is to promote student research, encourage science literacy, and publish the highest quality student articles.

Wong and Liu's article will be published online and in print at the end of January. For more information, visit www.jes2s.com.
